TRIAL

Psychoeducation for Uveal Melanoma

NCT ID: NCT06075589 Phase: NA Sponsor: Jonsson Comprehensive Cancer Center Status: Active Not Recruiting

SUMMARY

This clinical trial evaluates a video-based psychoeducational intervention for patients with uveal melanoma. Uveal melanoma (UM) is a rare intraocular cancer. UM patients face an uncertain course of survivorship in terms of their visual acuity, treatment-related side effects, and risk for eventual metastasis of the cancer. Learning about patients' thoughts and reactions to informational resources may better support patients during ocular melanoma survivorship.

KEY ELIGIBILITY CRITERIA

- * Adults (age 18 years and older at visit 1)
- * History of uveal melanoma as documented in their University of California, Los Angeles (UCLA) medical record
- * Receipt of uveal melanoma treatment and/or ongoing follow-up care at the UCLA Jules Stein Eye Institute, as documented in their UCLA medical record
- * Ability to read, write, and converse in English
- * Access to the internet via a computer or cell phone
- * Access to a personal email address
- * Written informed consent obtained from subject or subject's legal representative and ability for subject to comply with the requirements of the study
